PROFILE

System analyst on platform integrations: I elicit and refine business requirements, write BR/FR/specs and dev tasks, describe REST in OpenAPI and async flows on Kafka/RabbitMQ, and own the slice through production. I stay with development and testing: acceptance criteria, defects, incidents via logs and SQL. Domain: external systems (WMS, government IS, payment contours). I use AI every day at work and in my own projects.

WHAT I ACTUALLY DO

Requirements & specs	Interviews and as-is analysis → business/functional requirements, specs, user stories / use cases, acceptance criteria, constraints and errors. Confluence docs, backend/frontend tasking, grooming and planning.
REST & OpenAPI	I write the service contract myself: resources, HTTP methods, request/response bodies, error codes, examples. Align the contract across teams before coding; keep it in Swagger / OpenAPI.
Kafka & RabbitMQ	I design async exchange: publishers and consumers, events and statuses, retries, discrepancy handling. Sequence diagrams for sync and async scenarios.
Models & SQL	UML: use case, sequence, activity. BPMN as-is / to-be. For integrations I describe entities, fields and relations. PostgreSQL SQL: JOINS, filters, aggregations — reports and incident data checks.
Test & prod	Acceptance criteria in the spec, spec updates during development, defect and production-incident analysis from logs and SQL, docs updated after release.
AI at work	Daily: Cursor, Claude, Gemini, ChatGPT, Codex (Astra). Drafts of specs and OpenAPI, SQL, log analysis, documentation, prototypes. I also build my own AI projects and automations.

EXPERIENCE

V6 Services (Виб Сервисес) · System Analyst (Middle+)

Sep 2024 — present

Retail-network contour: platform integrations of internal services with WMS and government IS, status exchange and data reconciliation.
Stack: REST, OpenAPI/Swagger, Kafka, RabbitMQ, PostgreSQL, UML, BPMN, Confluence, Agile.

- Elicited requirements from internal and external stakeholders; wrote specs and dev tasks with acceptance criteria.
- Described REST APIs in OpenAPI/Swagger: methods, models, errors, examples. Contract alignment sped up production releases.
- Designed Kafka and RabbitMQ scenarios: events, statuses, retries, discrepancy handling; sequence diagrams for service interaction.
- WMS and government-IS integrations: exchange contract, statuses, discrepancies, operational support.
- PostgreSQL SQL for operational reports and reconciliation; log/defect analysis in prod; Confluence documentation.
- Broke down backend/frontend work, ran grooming/planning, joined architecture decisions, stayed through launch.
- Outcome: full-cycle integration (requirements → launch) — process labour **cut in half across the retail network**; less post-release rework.

Best2Pay · System / Business Analyst

Apr 2024 — Nov 2024

Payment / client solutions on legacy. Intern Apr–Jul 2024, System / Business Analyst from Jul 2024.

- Promoted intern → analyst in 3 months; owned client-solution work independently.
- Reverse-engineered legacy behaviour and user journeys; wrote and aligned specs for design and engineering.
- Tracked process delivery for new functionality; kept a wiki of decisions and specs.

Internships

IATE MEPhI · analyst intern · Jan 2024 — Apr 2024. BPMN / process models, data analysis, analytical notes.
InfoTeCS · information-security analyst intern · May 2022 — Aug 2022. Security-contour processes, new process descriptions, potential vulnerability review.

EDUCATION

MEPhI, Moscow — Information Security, Master’s	2020 — 2025
HSE University — Business Informatics, Master’s	2019 — 2023
